

Portable Testing

As the heart of any critical DC power application, businesses need confidence that their batteries will perform without fail. Eagle Eye's offering of robust, portable testing equipment provides trained technicians with exactly what they need to accurately test and measure batteries – forecasting failure before it's too late.

Portable Testing That's Reliable

Digital Hydrometers

Get results within seconds when you measure the specific gravity, temperature, density and density-related values of your sample with Eagle Eye's state of the art digital hydrometers/density meters.

Battery Testers

Easily ensure backup power system reliability with the fastest, smallest, and most accurate battery testers in the industry today. Multiple kit options available to fit your needs.

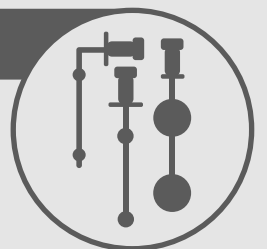

Ground Fault Locators

If a ground fault exists, Eagle Eye's GFL-1000 will identify faulty grounding where electrical cables have breakage and loss to the ground – without ever having to de-energize the live circuit.

Other Portable Testers

Eagle Eye carries a number of different types of testers, including impedance and capacity, that all comply with IEEE and NERC PRC-005 standards.
